Daily Symptom Checker

Any of the symptoms below could indicate a COVID-19 infection in children and may put your child at risk for spreading illness to others. Please note that this list does not include all possible symptoms and children with COVID-19 may experience any, all, or none of these symptoms. **Please check your child daily for these symptoms:**

People with COVID-19 have had a wide range of symptoms reported - ranging from mild symptoms to severe illness. Symptoms may appear 2-14 days after exposure to the virus

Section 1

People with these symptoms may have COVID-19:

- Fever or Chills
- Cough
- Shortness of breath or difficulty breathing
- Fatigue
- Muscle or body aches
- Headache
- New loss of taste or smell
- Sore Throat
- Congestion or runny nose
- Nausea or vomiting
- Diarrhea

Section 2

Close Contact Potential Exposure

Please verify if:

- Your child has had close contact (within 6 feet of an infected person for at least 10 minutes) with a person with confirmed COVID-19
- Someone in your household is diagnosed with COVID-19
- Your child has traveled to an area of high community transmission or a state listed within NJ's quarantine list.

If ANY of the fields in section 2 are checked off, your child should remain home for 14 days from the last date of exposure (if child is a close contact of a confirmed COVID-19) or date of return to New Jersey. Contact your child's doctor and the school.

As always, if your child has a fever (vomiting or diarrhea) they need to remain home for a minimum of 24 hours, symptom free without medication.
